

An Introduction to the Venture Partners

Backing early-stage businesses that impact key global issues in science, engineering and technology

Founded 2014 | St Andrews, Scotland

Deep Roots in Scotland with a Global Mindset

Venture Partnerships are ongoing co-investment agreements, where both parties keep discretion in their investment decision. Ad-hoc collaborations on specific investments are commonplace. Venture Partnerships are the next level up, where we agree on an ongoing shared investment focus, the strengths of both organisations being complementary, therefore to share dealflow.

A few of Eos strengths are our extensive access to the Scottish start-up market and our ability to lead due diligence and transactions on deep science and technology. We look for venture partners who have a range of complimentary strength, on top of their ability to co-invest, for example networks into global markets, ability to invest at Series A and trade connections and experience.

Each Venture Partnership is unique, based on the overlap of interests. We are seeing particular growth in life science and climate change opportunities, and actively looking for new UK and international Venture Partnerships in these areas, whilst continuing to invest across our 4 impact areas.

Disease Diagnosis,
Prevention & Treatment

Food & Water
Security

Energy Security Issues,
Climate Change & Pollution

Sustainability of Industrial
Processes & Infrastructure

Venture Partnerships can be viewed as a corporate syndicate, giving shared access to investment opportunities, whilst remaining active investors. These commitments ranges from £250k to £2.5 million per annum, but dependent on relevant dealflow, so there is no transfer of funds upfront. We welcome enquiries from individuals, family offices, VC impact investors and corporates who have a similar venture partnership model and whom are interested in early stage investments.
